How to Cancel an Ongoing Program

This guide will help you escape an ongoing program.

Written By: John Baek

INTRODUCTION

Some programs may accidentally run into an inescapable loop, causing your program to become unresponsive. This guide will help you make your calculator responsive again.

Step 1 — How to Cancel an Ongoing Program

- To break the calculator out of the loop, simply press the "ON" button. Doing so will force cancel the program.

If the calculator freezes every time you run a certain program, then do not run that program.
